

KX Technology: IT Support & Security Policy

Document ID: KX-IT-2026-005

Effective Date: June 1, 2026

1. IT Support Channels

For technical issues, contact the IT Service Desk via Slack at #it-support or call ext. 4444.

For urgent system downs, submit an emergency ticket in the KX-IT Portal.

The Service Desk is staffed on business days from 08:30 to 18:30; after-hours emergencies are handled by the on-call engineer via the KX-IT Portal.

2. Support Severity and Response Times

Severity 1 (critical outage affecting many users) is acknowledged within 30 minutes.

Severity 2 (major issue affecting a single team) is acknowledged within 4 business hours.

Severity 3 (standard request such as software installation) is acknowledged within 1 business day.

3. Password Complexity & Reset Rules

Passwords must be at least 12 characters and include numbers and special symbols.

Passwords must be changed every 90 days. Account lockout occurs after 5 failed attempts.

To unlock accounts, employees must verify identity via a video call with IT.

Reusing any of the previous 5 passwords is not permitted, and passwords must never be shared between employees.

4. Multi-Factor Authentication

Multi-factor authentication (MFA) is mandatory for all corporate accounts, including email, the KX-IT Portal, and VPN access.

Approved second factors are the company authenticator app and hardware security keys; SMS codes are not accepted for privileged systems.

5. Hardware Requests & Replacement

Standard laptop replacements occur every 3 years of continuous employment.

Employees can request software licenses (e.g. Adobe, JetBrains) via the IT Request Form, which requires approval from their respective line manager.

Lost or stolen devices must be reported to the IT Service Desk immediately so the device can be remotely locked and wiped.

6. Network & VPN Usage

Employees working remotely (WFH) must connect via the KX Secure VPN.

Connecting company devices to public unprotected Wi-Fi networks is strictly prohibited.

Personal devices may access corporate email only after enrolment in mobile device management (MDM).

7. Phishing and Incident Reporting

Suspected phishing emails must be reported using the 'Report Phishing' button in the mail client rather than deleted.

Any suspected security incident, including malware or lost credentials, must be reported to the IT Service Desk within 1 hour of discovery.
